

ULTRAglaZe

“Only Comparable to Glass”.....

Care & Maintenance

OUR ADVICE

**DO NOT IMMEDIATELY REMOVE THE PROTECTIVE FILM.
FILM SHOULD ONLY BE REMOVED ONCE ALL OTHER SITE
TRADE WORK HAS BEEN COMPLETED.**

ULTRAglaZe SURFACE

Once the protective film is removed you should clean your doors and panels with a damp micro fibre cloth using a light circular motion. This will remove any residue left from the protective film.

For ongoing cleaning simply use a damp micro fibre cloth and either water or your favourite surface cleaner.

Ultraglaze is very scratch and chemical resistant however we recommend that you always use a micro fibre cloth when cleaning the surface.

Thank you for purchasing from our ULTRAglaZe range. We hope you enjoy your kitchen for many years to come.
